
The **KPIs** for this analysis are as follows :

Total Leads : Count of VendorLeadIDs
Good Leads : Count of VendorLeadIDs where the CallStatus is either of these : Closed, EP Confirmed, EP Sent, EP Received
Lead Quality % : Good Leads / Total Leads.

The Line Graph above shows the Lead Quality trend over the period of the respective 6 months for the year 2009.

No consistent trend is observed, rather there's fluctuation in the lead quality % over months. But considering the lead quality % for the months of April & September, there is a overall slight improvement from 15.25% in April to 16.86% in September.

The fluctuations suggest that lead quality is influenced by certain underlying factors, which requires further analysis.

INSIGHTS FOR Q2

- While Some lower **address scores** show higher lead quality percentage, the volume for them is low. Whereas the the higher address score segments like 5 are more stable in volume and lead quality.
- Higher **phone score** leads provides stable volume and lead quality which highlights the importance of contactability.
- **Advertise.com** delivers the highest quality leads (33.33%) while **google** performs relatively lower (11%).
- High **Debt segments** underperform while mid to high segments (10k-90k) shows stronger performance.
- Certain **Widgets** have outperformed significantly (24%) which shows ad creatives do have critical impact on the lead quality.

FINAL INSIGHTS

As per the insights based on each of the drivers mentioned before,

- Leads with Higher AddressScore and PhoneScore should be prioritized as they provide more stable and scalable performance indicating better data accuracy and Contactability.

- From a partners perspective, High performing partners like advertise.com should be scaled while reducing the dependency on low performing sources like google to improve traffic quality.

- When it comes to debt level, mid-high debt segments should be focused on, as they demonstrate stronger performance as compared to extremely high debt segments.

- High-performing ad creatives should be scaled further as they do have significant impact on the lead quality.

Overall, the above actions would increase the proportion of high-quality segments and reducing low-quality segments. As a result, the overall lead quality is expected to improve, leading to increase in CPL and maximizing revenue.
